

Got drones?

Drones (a.k.a. "unmanned aerial vehicles" or "UAVs") are very popular for recreational use. Many drone owners and users are new to aviation, so we hope you find this information useful to safely enjoy your new drone.

Chandler Municipal Airport is one of the busiest general aviation airports in the US with approximately 200,000 aircraft operations each year. Per the Airport's Rules and Regulations, which is part of the Chandler City Code:

"No person shall fly or release a model aircraft, rocket, kite, fireworks, tethered-balloon, etc., on or within two (2) miles of the airport if such activity would create a hazard to aircraft operations."

Review the [Know Before You Fly](#) website for valuable information about flying your drone responsibly. The [Know Before You Fly](#) campaign is a partnership between the Federal Aviation Administration (FAA), the Association for Unmanned Vehicle Systems International, the Academy of Model Aeronautics and the Small UAV Coalition.

Here are some key tips to fly safely and responsibly:

- Review the [Know Before You Fly](#) website.
- Drones can't be operated within a 5 mile radius of any towered airport without agreement from the control tower.
 - For the Chandler Municipal Airport, this means anywhere between a 2 mile radius and a 5 mile radius from the Airport.
 - The Air Traffic Control Tower at Chandler can be reached at (480) 917-8005.
- Fly your drone under 400 feet and don't go near stadiums, airports, public buildings and large groups of people.
- Don't fly your drone over another person's land without their permission.
- Don't fly your drone over cars, trucks, motorcycles, and other vehicles.
- Never fly your drone near a manned aircraft.
- Never fly your drone while under the influence of alcohol, etc.
- Always fly your drone within your direct line of sight.
- If you see a drone safety issue, call your local law enforcement agency.
